TERMS OF ACCEPTANCE FOR EMPTIED PACKAGING

- Packaging must be empty.
- For health & safety and legal reasons and to prevent problems during handling and transport, the packaging must be properly closed with their original closure system(s). They must be secured in such a way that no residues or vapors can escape during handling or transportation.
- Product labels with hazardous material information must conform to the last filled product and must not be removed or made illegible.
- MSDS must be provided by the client/generator upon request.
- Packaging that last contained toxic, highly irritating, odorous or proven CMR (carcinogenic, mutagenic and reprotoxic) products or products that could cause health and/or safety problems during their handling and processing must be decontaminated.
    - Decontaminated packaging must be clearly marked and supplied with a dated certificate. If neutralizing agents were used, the hazard symbols of both the neutralizing agents and any products formed through chemical reactions must also be displayed.
    - If such packaging is not decontaminated, DRUMDRUM can, upon request, provide a quotation for the decontamination of specific products.
- DRUMDRUM cannot accept packaging that has been used for radioactive substances, explosives, gases, infectious materials, or asbestos.
- Packaging emptied of products that contain PFAS must be pre-registered via collections@drumdrum.eu. DRUMDRUM will then propose the appropriate treatment. These products must be collected/delivered as a separate flow.
- The client/generator is responsible to ensure that the packaging is ready for collection and meets the collection conditions. Should a packaging fail to meet any of the collection conditions, DRUMDRUM is entitled to refuse to load/unload the package(s) and/or charge the client/generator for costs incurred.
- The client/generator is responsible for the correct and complete loading of the packaging into the trailer of swap bodies, in compliance with European load-securing regulations (EU Regulation 2014/47). Packaging must be loaded with closures facing upwards. Packaging on pallets must be secured with straps, stretch wrap, or tape. Packaging must be sufficiently clean to avoid contaminating the transport vehicle. If this is not the case, the costs for cleaning of the vehicle will be charged.
- The number of the collected items and the grading will be determined at unloading at DRUMDRUM or its subcontractors. These numbers and grading are binding. The indication of the client/generator on the bill of lading is not binding.
- Transport documents (e.g. bill of lading) will be provided by DRUMDRUM or its subcontractors. The generator is responsible for checking the transport documents, refilling them where necessary and signing these documents.
- DRUMDRUM takes over the responsibility for the packaging that meets the acceptance conditions during sorting/processing at DRUMDRUM or at the subcontractors. The client/generator remains responsible and owner for packaging that does not meet the acceptance conditions.
- By using DRUMDRUM's collection services or delivering packaging to DRUMDRUM, the client/generator accepts these terms and conditions and agrees to pay for all costs incurred in relation to non-compliant packaging.
